Solutions to improve the quality of life

Wireless Systems

ZoomLink

Tune in for a Crisp Sound

PHONAK
hearing systems

ZoomLink by Phonak is a new transmitter with a built-in microphone and an easy, three button interface. ZoomLink features an Omni, Zoom and SuperZoom² mode, which provides the user in each listening situation with the right reception angle. ZoomLink is compatible with all Phonak receivers.

Wireless hearing systems are by far the best technology to **improve speech understanding in noise**, addressing the number one desire of adult hearing instrument users.

The MyLink receiver with the ZoomLink transmitter is a very attractive combination. MyLink is compatible with all hearing instruments with a T-coil, including custom products. Together with the easy and flexible ZoomLink transmitter, your clients will be able to tune in for a crisp sound!

Proven Technology

A) Hidden antenna

The antenna is cleverly hidden in the lavalier cord, which can be used to hang ZoomLink around the neck of a speaker.

B) Easy and precise operation

ZoomLink has three easily accessible buttons. Each button functions as an on-off button. ZoomLink will start operating in Omni-directional mode, Zoom mode or SuperZoom² mode, depending on which button was pressed. A short press on any of the buttons will change the microphone mode. A long press on any of the three buttons will switch ZoomLink off again.

C) Digital beamforming microphones

The high quality microphones in ZoomLink can operate in three different modes. In Omni-directional mode, sound is picked up equally from all directions. In Zoom mode, the beamformer has a fixed cardioid characteristic. In SuperZoom² mode, the beamformer is adaptive in 20 independent frequency channels. On top of that, a multi-frequency fast noise suppression algorithm is active in SuperZoom² mode, suppressing any residual stationary noises coming from the front. The microphones are shielded by a very effective wind and weather protection.

Efficient Counselling

ZoomLink and MyLink form an ideal and affordable system for better communication in noisy situations or over distance.

Simply show your client how to:

- switch on ZoomLink
- switch on MyLink and set the hearing instruments to MT or T
- play with the different microphone modes of ZoomLink to discover the optimal reception angle for a particular listening situation

The ZoomLink-MyLink bundle is the best you can get for better hearing in noise, when both affordability and flexibility are on your wish list.

ZoomLink is a member of the wide range of Phonak wireless transmitters. ZoomLink is compatible with all Phonak receivers, including MicroMLxS, MLxS, ML9S, iLink, MicroLink Freedom, MicroLink CIS, MicroLink Baha, EduLink and MyLink.

MyLink is a member of the wide range of Phonak receivers.

MyLink is compatible with all hearing instruments with a T-coil.

Online support
