

Connevens Limited Environmental Policy

Connevens Limited is committed to minimising the impact of its activities on the environment.

The key points of our strategy to achieve this are as follows:

- We will minimise waste by evaluating operations and ensuring they are as efficient as possible, according to the principles of reduction, re-use and recycling.
- We will minimise toxic emissions through the selection and use of our vehicles and the source of its power requirement.
- We give due consideration to environmental issues and energy performance in the acquisition, design, refurbishment, location and use of our building.
- We will maintain the solar panels we have installed on the roof of our building and seek to reduce the amount of non-solar power we consume.
- We actively promote recycling both internally and amongst our customers and suppliers.
- We will implement a training program for our staff to raise awareness of environmental issues and enlist their support in improving the Company's performance.
- We source and promote a product range to minimise the environmental impact of both production and distribution.
- We will encourage the adoption of similar principles by our suppliers and contractors.
- Meet or exceed all the environmental legislation that relates to the Company.
- To assess the environmental impact of all historic, current and likely future operations and continuously seek to improve environmental performance.

To ensure we meet these commitments we will review our environmental policy regularly (at least once a year).
