

Plantronics USB adaptors

These bottom cables allow you to use a SupraPlus headset directly with a computer via a USB socket. They are ideal for use with VoIP telephony services, especially programs such as Skype. It provides universal compatibility, allowing the PC speaker to ring for incoming calls and has Plug and Play connectivity.

The DA70 is the basic model and the DA80 has more advanced features and built-in volume control buttons.

In-line telephone handset amplifiers

A useful product to substantially boost the listening volume of your existing telephone. Ideal for those who find their office telephone not as loud as it used to be!

T-Loud A basic feature model with a reasonable 20dB amplification, with some telephones there can be a slight delay when turning on. The T-Loud works with most but not all handsets as it does not have compatibility setting options.

The T-Loud is a basic, low-cost solution.

The **Phone Plus PL51** has very good volume levels and tone controls. The long physical slider movement for volume and tone makes adjustment easier and the changes appear more gradual. The boost button, which operates whilst it is held down gives a doubling boost. The PL51 has a 3.5mm headphone socket for use with headphones, inductive neck loop or direct input and a choice of 4 compatibility settings for different curly cord handset systems.

In the opinion of our evaluation panel, the PL51 is a more advanced option, with the loudest volume boost – it would be our recommended choice.

These amplifiers are for use with corded phones, both digital and analogue, with detachable handsets. Connection is very easy and the same for both models – the in-line amplifier is connected between the 'curly' handset cable and the telephone base unit (via the 4 pin modular RG10 connector). Basically, the 'curly' handset is unplugged from the phone and the in-line amplifier connected instead. The handset cable is then plugged into the in-line amplifier.

All the in-line telephone amplifiers have a battery and an automatic 'turn off' when not in use.

Please note that if you try to use an in-line telephone amplifier with an already amplified telephone you will probably have problems with feedback and distorted sound from the handset.
