

Telephone ring indicators

A telephone ring indicator is a device to help let you know when there is a telephone call. A ring indicator has a louder ring than a telephone and usually a choice of sounds. Some flash and some have a vibrating pad option to wake you at night.

The most reliable type of indicator plugs directly into a phone socket. This is easy to do and can be plugged into any phone socket in the house. The indicator doesn't have to be plugged into the same socket as the telephone – in fact, the best approach is to have it where you spend most of your time, even if that is not where the telephone is.

Wireless versions such as the Signolux are great if you don't have a telephone socket nearby.

The RingFlash indicators use an attached 'microphone' for sound pickup instead of direct connection – these 'hear' when the phone is ringing.

The **Geemarc Amplicall 10** is a compact & modern design with options of visual alert, sound or vibration (vibrating pad purchased separately). *With its very reasonable price tag, the Amplicall 10 is our overall best value buy.*

The **Geemarc Amplicall 20** is the same as the Amplicall 10 but with the addition of a wireless doorbell push, allowing it to alert you to visitors at the door as well as a telephone call.

The **RingPlus** has a sound pick up sensor which should be attached over the telephone buzzer. It offers a good bright strobe and is suitable for use with most telephones and also door entry systems. The RingPlus may be used flat or wall mounted. *Our recommended choice when direct connection is not possible.*

The **Signolux** has a wireless transmitter which can be used with any device that makes a loud noise such as an existing doorbell or door entry system. It offers a good bright strobe and can be used freestanding or wall-mounted. *A great wireless solution, that can also be used to alert you to a range of triggers around the house, making it a multi-purpose system.*

The **Connevens PPS433** vibrating pager system will alert you to the telephone (and other environmental alerts) wherever you are in the house or even the garden! Operation is very straightforward and you carry the pager vibrator with you. Although at first sight the PPS433 is an expensive choice, the system offers a comprehensive integrated solution to all your alerting needs – it does not require specialist installation. *(See Section 8 – Alerting Devices)*
